

Home

Welcome to the OpenIDM Wiki.

 OpenIDM is an open standards based identity management solution. In addition to being open source, OpenIDM offers high flexibility in business process handling and compliance. A flexible user interface combined with a robust workflow engine make OpenIDM ready for any identity management project.

Note: This is a legacy page. For nightly builds and draft documentation, see <http://openidm.forgerock.org/>. For documentation on the latest Enterprise release of OpenIDM, including download instructions, see docs.forgerock.org/en/openidm/3.1.0/.
