

openam-config-upgrader

A tool for converting AM configuration files (Amster export or FBC) to be usable with a newer version of AM. The [project](#) is within the openam repository. The [README](#) and its examples is a good place to start, as is the the CLI output. The tool is delivered as part of the AM.zip. It is driven by rules that are either delivered along with the tool or even custom written.

amupgrade CLI

```
Usage: amupgrade [options] <Rules files>
Options:
* --inputConfig, -i
    The input configuration directory
* --output, -o
    The output configuration directory
