## Welcome to the OpenIDM Wiki.

 OpenIDM is an open standards based identity management solution. In addition to being open source, OpenIDM offers high flexibility in business process handling and compliance. A flexible user interface combined with a robust workflow engine make OpenIDM ready for any identity management project.

Note: This is a legacy page. For nightly builds and draft documentation, see <http://openidm.forgerock.org/>. For documentation on the latest Enterprise release of OpenIDM, including download instructions, see [docs.forgerock.org/en/openidm/3.1.0/](https://docs.forgerock.org/en/openidm/3.1.0/).
